```
The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) indicated to the N terminus of immunoglobulin (Ig) indicated to the N terminus of the CH1 domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VBER) receptor; reducing tumour growth; inhibiting angiogenesis, reducing endothelial cell proliferation; inhibiting vBGF induced migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in vitro for investigative, diagnostic or treatment continuing interaction of the antigen-binding proteins production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous can din tetrament for processing in vitro to obtain the complete product. There is no requirement for processing in vitro to obtain variable domain complementarity determining region L1 (CDRL1) incorporated into an antigen-binding protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The invention relates to novel single-chain antibody recognizing human vascular endothelial growth factor receptor-2 (VEGFR-2) comprising a polypeptide having variable heavy (VH) and variable light (VL) domains connected by a linker, and their allelic variants and mutants. The antibody is useful as an immunohistochemical marker for angiogenesis or vascularisation in a human tissue from cryosection or a growing carcinoma, for vascular and stem cell targeting a drug or toxin, radionuclide, gene or viral coat protein conjugated to it, for radionuclide, gene or viral coat protein conjugated to it, for calls expressing human vascular endothelial growth factor receptor-2, cuch as human vascular endothelial cells, human megakaryocytes and their progenitor cells, human haematopoietic stem cells from bone their progenitor cells, human haematopoietic stem cells from bone their progenitor cells, human haematopoietic stem cells from bone their progenitor cells, human haematopoietic stem cells from bone their surfaces. Recombinant single chain antibodies have many advantages compared to monoclonal antibodies derived from hybridomas. The surfaces, easily purified from the bacteria periphasm or supernatant without risk of contamination with serum-components. No expensive cell:culture medium and expensive cell-culture laboratory is needed and they penetrate better into cells and tissue and are better used for in vivo imaging and in vivo diagnostic applications. The size they penetrate better into cells and tissue and are better used for in vivo imaging and in vivo diagnostic applications. The radionuclide, gene or a viral coat protein. The present sequence is the variable light chain of antibody scFvA7.
                                                                                                                                                                              Single-chain antibody that recognizes human vascular endothelial growth factor receptor-2 is useful as a marker for angiogenesis or vascularisation in human tissues and for cell sorting of vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibody; scFvA7; light chain; angiogenesis; vascularisation; vascular endothelial; growth factor receptor 2; VEGFR-2; carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 96;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU08981
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δà
   The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides canding different immunoglobulin binding protein (IgBP) polypeptides canding different immunoglobulin binding protein (IgBP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transferded cells, to generate an IgBP that binds to a ligand, and transformed plant cells are selected, and preparing an IgBP array in plant cells. At least one peptide sequence has at least 73% sequence identity to a framework region (FR) of a native IgM, IgG, IgA, IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein cells especially plant cells (e.g. Agrobacterium tunmefaciens or maize) cor other enkaryotic cells (e.g. insect cells or manmalian cells). The CHBP is useful for discovery of e.g. screening assays of IgBPs having desired characteristics. The present sequence is a mammalian controlled that may be incorporated into an IgBP of the cells of the control or mand into an IgBP of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs having the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of the control or discovery of e.g. screening assays of IgBPs of e.g. the mand of the control or discovery of e.g. e.g. the mand of the control or discovery of e.g. e.g. the mand of the control or discovery of e.g. e.g. the mand of the control or discovery of e.g. e.g. the control or discovery of e.g. e.g. the control or discovery of e.g. e.g. th

Single-chain antibody that recognizes human vascular endothelial growth factor receptor-2 is useful as a marker for angiogenesis or vascularisation in human tissues and for cell sorting of vascular endothelial cells

Page 20; 35pp; English Claim 1;

The invention relates to novel single-chain antibody recognizing human vascular endothelial growth factor receptor-2 (VEGER-2) comprising a polypeptide having variable heavy (VH) and variable light (VL) domains connected by a linker, and their allelic variable light (VL) domains connected by a linker, and their allelic variable light (VL) domains artibody is useful as an immunohistochemical marker for angiogenesis or vascularisation in a human tissue from cryosection or a growing carcinoma, for vascular and stem cell targeting a drug or toxin, radionucilide, gene or viral coat protein conjugated to it, for fluorescence activated cell sorting (FACS) analysis and sorting of cells expressing human vascular endothelial growth factor receptor-2, such as human vascular endothelial cells, human megakaryocytes and their progenitor cells, human haematopoietic stem cells from bone marraces. Recombinant single chain antibodies have many advantages compared to monoclonal antibodies derived from hybridomas. The surfaces medium and expensive cell-culture laboratory is needed and they penetrate better into cells and tissue and are better used for in vivo imaging and in vivo diagnostic applications. The single-chain antibodies are easily fused to a drug, toxin, radionucilide, gene or a viral coal protein. The present sequence is the variable light chain of antibody scray2.

US-09-982-107
US-09-982-107
Sequence 127
Patent No. US20020159958A1
Sequence 127
Patent No. US20020159958A1
GENERAL INFORMATION:
TITLE OF INVENTION: METHODS FOR PRODUCING IMMUNOGLOBULINS CONTAINING
TITLE OF INVENTION: MOTHER: 2001-10-16
CURRENT APLICATION NUMBER: US/09/982,107
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 12
SEQ ID NO 12
TYPE: PRIF
                                                                                                                                                                                              Gaps

Nature 352, 624, 628, 1991
A. Title: Making antibody fragments using phage display libraries.
A. Reference number: $17230; MUID: 91326098; PMID: 1907718
A. Accession: $17639
A. Status: preliminary
A. Molecule type: nucleic acid
A. Residues: 1-91 < CLA>
C. Superfamily: immunoglobulin V region; immunoglobulin homology
C. Keywords: heterotetramer: immunoglobulin
F: 8-81/Domain: immunoglobulin homology < NAMA>

Apple beta-galactosidase. Activity against cell wall polysaccharides and characterization of a related cDNA clone.";
Plant Physiol. 106:521-528(1994).
-!- FUNCTION: Involved in cell wall degradation. Degrades polysaccharides containing beta-(1->4)-linked galactans, acting as an exo-(1->4)-beta-D-galactanase.
-!- CATALYIC ACTIVITY: Hydrolysis of terminal, non-reducing beta-D-galactose residues in beta-D-galactosides.
-!- SIMILARITY: BELONGS TO FAMILY 35 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                            01-FEB-1996 (Rel. 33, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                             Yamaguchi K., Subramanian A.R.; The plastid ribosomal proteins. Identification of all the proteins in the plastid ribosomal proteins. Identification of all the proteins in the 50 s.mbunit of an organalle ribosome (chloroplast)."; J. Biol. Chem. 275:28466-28482(2000).
J. Biol. Chem. 275:28466-28482(2000).
FUNCTION: RESPONSIBLE FOR THE RELEASE OF RIBOSOMES FROM MESSENGER RNA AT THE TERMINATION OF CHLOROPLASTIC PROTEIN BIOSYNTHESIS (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SIMILARITY).

- SUBCELLULAR LOCATION: CHLOROPLAST. THE MAJOR PART WAS FOUND IN THE STROMA AND SOME PROTEIN WAS IN THE ENVELOPE SUBFRACTION, BUT NO PROTEIN WAS DETECTED IN THE THYLAKOIDS.
- TISSUE SPECIFICITY: RESTRICTED TO PHOTOSYNTHETIC TISSUES.
- MISCELLANEOUS: EXPRESSION SCEMS TO BE LIGHT-INDEPENDANT.
- SIMILARITY: BELONGS TO THE RRP FAMILY.
                                                                                                                                                                                                                                        Rolland N., Janosl L., Block M.A., Shuda M., Teyssier E., Miege C., Cheniclet C., Carde J.-P., Kaji A., Joyard J.;

Cheniclet C., Carde J.-P., Kaji A., Joyard J.;

"Plant ribosome recycling factor homologue is a chloroplastic protein and is bactericidal in Escherichia coli carrying temperature-sensitive ribosome recycling factor."

Proc. Natl. Acad. Sci. U.S.A. 96:5464-5469(1999).

Proc. Natl. Acad. Sci. U.S.A. 91:2785-7789(1994).
-!- FUNCAION: MAY PROVIDE A DEGREE OF PROPECTION AGAINST MICROBIAL INVASION OF GERMINATED BARLEY GRAIN THROUGH ITS ABILITY TO DEGRADE FUNGAL CELL WALL POLYSACCHARIDES.
-!- CATAMIYTIC ACTIVITY: Hydrolysis of 1,3-beta-D-glucosidic linkages in 1,3-beta-D-glucans.
-!- SIMMIARITY: BELONGS TO FAMILY 17 OF GLYCOSYL HYDROLASES.
